

FEC Data Sheet

IMPORTANT: In order to obtain the most meaningful test result, EBW suggests a faecal egg count *not* be undertaken immediately *after* deworming. Unless you have concerns your horse may harbour resistant worms, it would be better to undertake a FEC just before you treat – the result may indicate deworming may not be warranted at this time.

Please Print Clearly

Horse's Name:				
About the horse:	Age	Gender	Breed	Approx. Weight (kg)
Approx. date of last treatment:				
Product used: (Brand Name or Active Ingredient if known)				
Recent illness history:				
Mare recent foaling history:				
Your Name:		Postal Address:		
Best Contact No.:				
Your Email (your confidential FEC report will be emailed to this address):				
Any other relevant information (eg, past history of worm resistance, reactions to anthelmintcs, etc.):				

Confirm *Before* You Worm!
